

We need to talk about your PI data

Have you had the 'how do I fix my PI data quality issues' conversation yet?

Is the quality of your PI data putting your value-added digital initiatives—i.e., analytics, APC, process optimization, predictive models, AI, etc.—and business at risk? We need to talk.

What is poor PI data quality costing you?

The conversation begins with MOTIVATION. Can you endure the risk of doing nothing?

The risk of missing something analytically due to bad data is too great. Identify **at the source** not when analysts use the data.

Why is solving the PI data quality issue so important?

It's all about VALUE. The objectives are broad but significant because PI data impacts every aspect of performance.

You want to remain in business? That's the ROI and the risk of doing nothing.

How do you frame the problem that needs solving?

The conversation then becomes about SIZE and SCALE. How do you solve and sustain it indefinitely?

The solution? DataWise your PI data today!

How do you bring it all TOGETHER? APERIO DataWise for PI workflows provide actionable insights to reduce data issues for broad positive impact across the organization. You can:

- ✓ Know the status of your PI data quality in real time for all 2M tags!
- ✓ Quickly identify and address PI issues including stale, missing, or bad data
- ✓ Easily track, report, and improve measurable data integrity
- ✓ Alert at the highest level of asset framework with recommended actions
- ✓ Can integrate alerts into PI Notifications for seamless visualization

PI as a trusted system of record is only **valuable** when you have **100% confidence** in its data quality.
